Practical 05 — Settings in a File, Bugs Caught by a Robot

SCSE3040 Machine Learning Operations · Bennett University

1. Student details

Name	Avni Saini
Roll number	S24CSEU1037
Batch	12
Date of laboratory session	27 October 2026

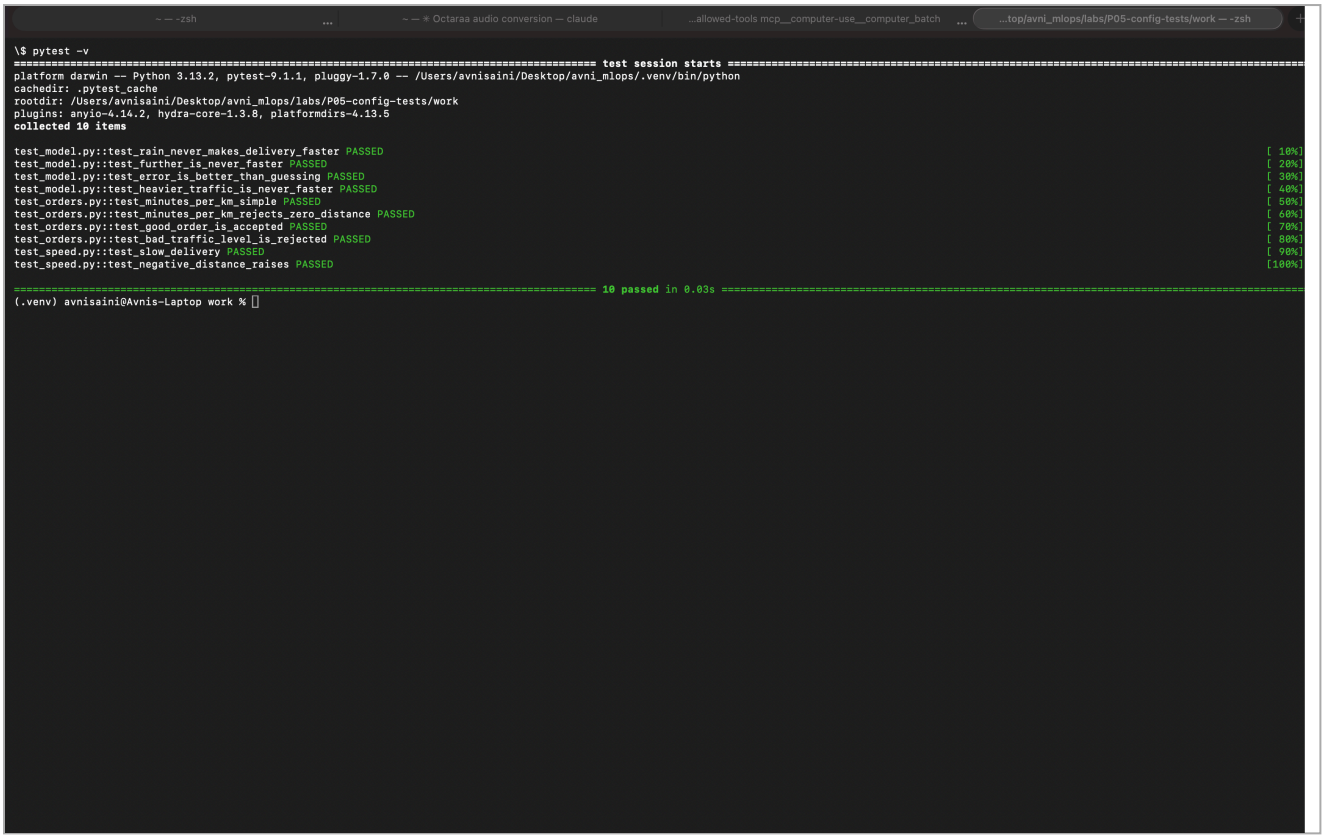

2. Repository link

`https://github.com/avni-saini/avni_mlops`

3. work/config.yaml

```
data:
  path: ../data/delivery_times.csv
  features:
  - distance_km
  - prep_time_min
  - traffic_level
  - rain
  target: delivery_min
split:
  test_size: 0.2
  seed: 42
model:
  name: linear_regression
training:
  max_rows: 300
```

4. Terminal output of `pytest`

5. Before and after the refactor

Before the refactor (settings hardcoded in the training code, Step 1): **MAE 1.92 minutes**. After the refactor (same settings read from `work/config.yaml`, Step 4): **MAE 1.92 minutes** — identical, which is the point: moving settings into a config file changed nothing about what the code computes.
